RETRACTED

2

New Techniques for Potential Field Data Interpretation

Khalid S. Essa
*Cairo University/ Faculty of Science/ Geophysics Department, Giza,
Egypt*

Retraction to: Essa KS. New Techniques for Potential Field Data Interpretation. In: Hwee-San Lim, editor. New Achievements in Geoscience. Rijeka: InTech; 2012. pp. 21-44. DOI: 10.5772/35050

The publisher is retracting and removing [1] following a report (filed by the author himself) that the parts of the chapter were identical or very similar to parts of other works of the same author, while they were not properly attributed.

Upon investigating the matter the author mentioned that he used parts of his doctoral thesis [2] and several of his previous publications [3-5] derived from his thesis that were co-published with his thesis supervisor and other authors. The author was unaware at all that this constituted redundant publication, self-plagiarism, and misattributed authorship.

After he was informed of the ethical issues related to this chapter, the author himself requested the chapter to be retracted.

The publisher regrets any inconvenience this might have caused to the readership.
